

Minutes of PEP Companion App UX Meeting

Location: Sir Charles Tupper Building

Date: March 3, 2017, 13:30.

Attendees:

From CODAPS: Daniel Cormier, Paul Coyte, Shannon Wilson

From Health Canada: Andrew Lamarche, Joseph Mikhael, Jeremy Sivanewaran, Rolf Zetzsche

Daniel presented the PEP Companion App UX prototype.

- Joseph suggested the splash screen graphic should be replaced with one like the Pesticide Labels App, pending permission from Andrew and Jeremy.

Daniel presented the first startup, profile creation, and main menu screens.

- Rolf mentioned the data would be Protected B when stored.
- Jeremy added the requirement that the data should be encrypted when stored.
- Joseph liked the main menu icons but suggested changes for the consultation icon, suggesting it should look less law-oriented (ie: remove the gavel, perhaps use an octagon shape)

Daniel presented each form screen in turn.

- Andrew commented the data entry fields should be larger.
- Jeremy suggested the 'ball and chain' model should have a larger ball for the active page. The goal would be to have a 16-point font for the text beneath the larger ball.
- Jeremy also suggested the 'use draft' form buttons should be changed to 'resume' and 'discard'.
- Final suggestion was to consider replacing pulldown menus with other options.
- Rolf clarified that the server would not be prepared in time, and that the CODAPS team were clear to use the data structure of their own design.
- Joseph asked that all identifying graphics and references to Health Canada be removed from the online prototype.

Meeting was adjourned.
