Terminology Document- CODAPS

Ball & Chain Navigation – The navigation system at the top of the app which allows the user to tell, at a glance, where they might be in the current form.

Case number – The reference number generated by the app when a form is submitted to PMRA.

CODAPS Team- Cody, Owen, Daniel, Alex Paul and Shannon.

Data Structure- The specific format that our submitted data will take. We have decided on a temporary form for this structure until Health Canada's server is fully functional.

Form – One of the individual documents (i.e.: "Voluntary Incident Report") which the user is meant to fill out through the application.

History – The list of all the case numbers that the user has submitted, and saved on their device.

Mock Server – A basic server that's meant to imitate Health Canada's formal server. This server's purpose is strictly to accept submitted forms for software testing purposes.

Page – a specific, artificial division of any given form. The application navigates from one page to the next, and presents the forms one page at a time.

PEP Companion App – The mobile app we are building meant to help modernize the Public Engagement Portal.

PEP – Public Engagement Portal, the collection of web pages that the Pest Management Regulatory Agency (PMRA) wishes to turn into an app.

PMRA- Pest Management Regulatory Agency

Profile- The information about the user that he or she has saved in the application for later access.

Secure Storage- Cordova plugin that securely stores user's data locally on their device.

Users - People who will be using the application.
